

# OLYMPUS®

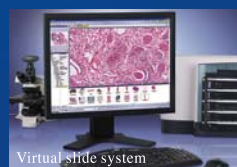

Your Vision, Our Future

Borderless technologies for remote diagnosis

With high-definition digital microscope images, Olympus virtual slide systems assist remote diagnostics for rural community patients.

We may be famous for our cameras, but not many people know we make digital microscope systems, too. Capturing high-definition views of tissue samples, these virtual slide systems assist medical recordkeeping accuracy and patient safety, and help bring advanced diagnostic services to remote rural communities. Olympus Opto-Digital Technology solutions. Bringing new benefits to medicine, science, industry... and life.
