Development of the Firmware that enables the RAW Video Data Output from Olympus Mirrorless Cameras to the ATOMOS NINJA V HDR Monitor Recorder

Olympus Corporation (President: Yasuo Takeuchi) is pleased to announce the development of firmware that enables output of RAW video data from Olympus OM-D E-M1X and Olympus OM-D E-M1 Mark III mirrorless cameras to the ATOMOS NINJA V HDR monitor recorder. Development is under way in collaboration with ATOMOS. Data is recorded to the ATOMOS NINJA V as Apple ProRes RAW for flexible image editing. This lends greater flexibility to professional video production post-processing tasks such as adjusting exposure and color grading recorded footage. The firmware is scheduled for release in winter 2020.

Olympus will continue supporting authentic video production and further improve hand-held high-definition video recording via compact, lightweight system thanks to unrivaled portability and powerful in-body 5-axis image stabilization.

About ATOMOS

Atomos exists to help creative professionals cut through technology barriers by creating easy to use, cutting-edge 4K and HD Apple ProRes monitor/recorders. These products give video professionals a faster, higher quality and more affordable production system, whether they create for social media, YouTube, TV or cinema. Atomos continues to demonstrate its commitment to putting users first through continual innovation at amazing price points. The company developed the AtomOS operating system dedicated to video recording with an elegant and intuitive touchscreen user interface and was also the first to implement the professional Apple ProRes RAW format for recording with cinema cameras. Atomos is based in Australia with offices in the USA, Japan, China, UK and Germany and has a worldwide distribution partner network.
